### MOTION F5

When it comes to tablet PCs, the Motion F5 has a lot of features that would allow the construction industry to do more in the field, and the device is also rugged and lightweight. With the Motion F5, workers can view project information to help improve documentation, materials management, and collaboration. The tablet PC has a range of features including a digital camera, RFID (radio-frequency identification) reader, barcode scanner, and mobile broadband. The company continues to add new features to the product to help it be more durable in the field for the construction industry, such as a durable outdoor display technology. The F5 is also able to withstand exposure to dust and moisture and the occasional bumps or drops that occur out at the jobsite. Motion continues to partner with software providers specific to construction, further enhancing this piece of hardware for the field.

## PLENTY OF PERFORMANCE AND A HECK OF A WORK ETHIC.

Introducing the hardest workers in your crew. For rugged jobsite computing, these tablets pass inspection.
